## How does OneDrive for Business synchronize files?

### The business of synchronization

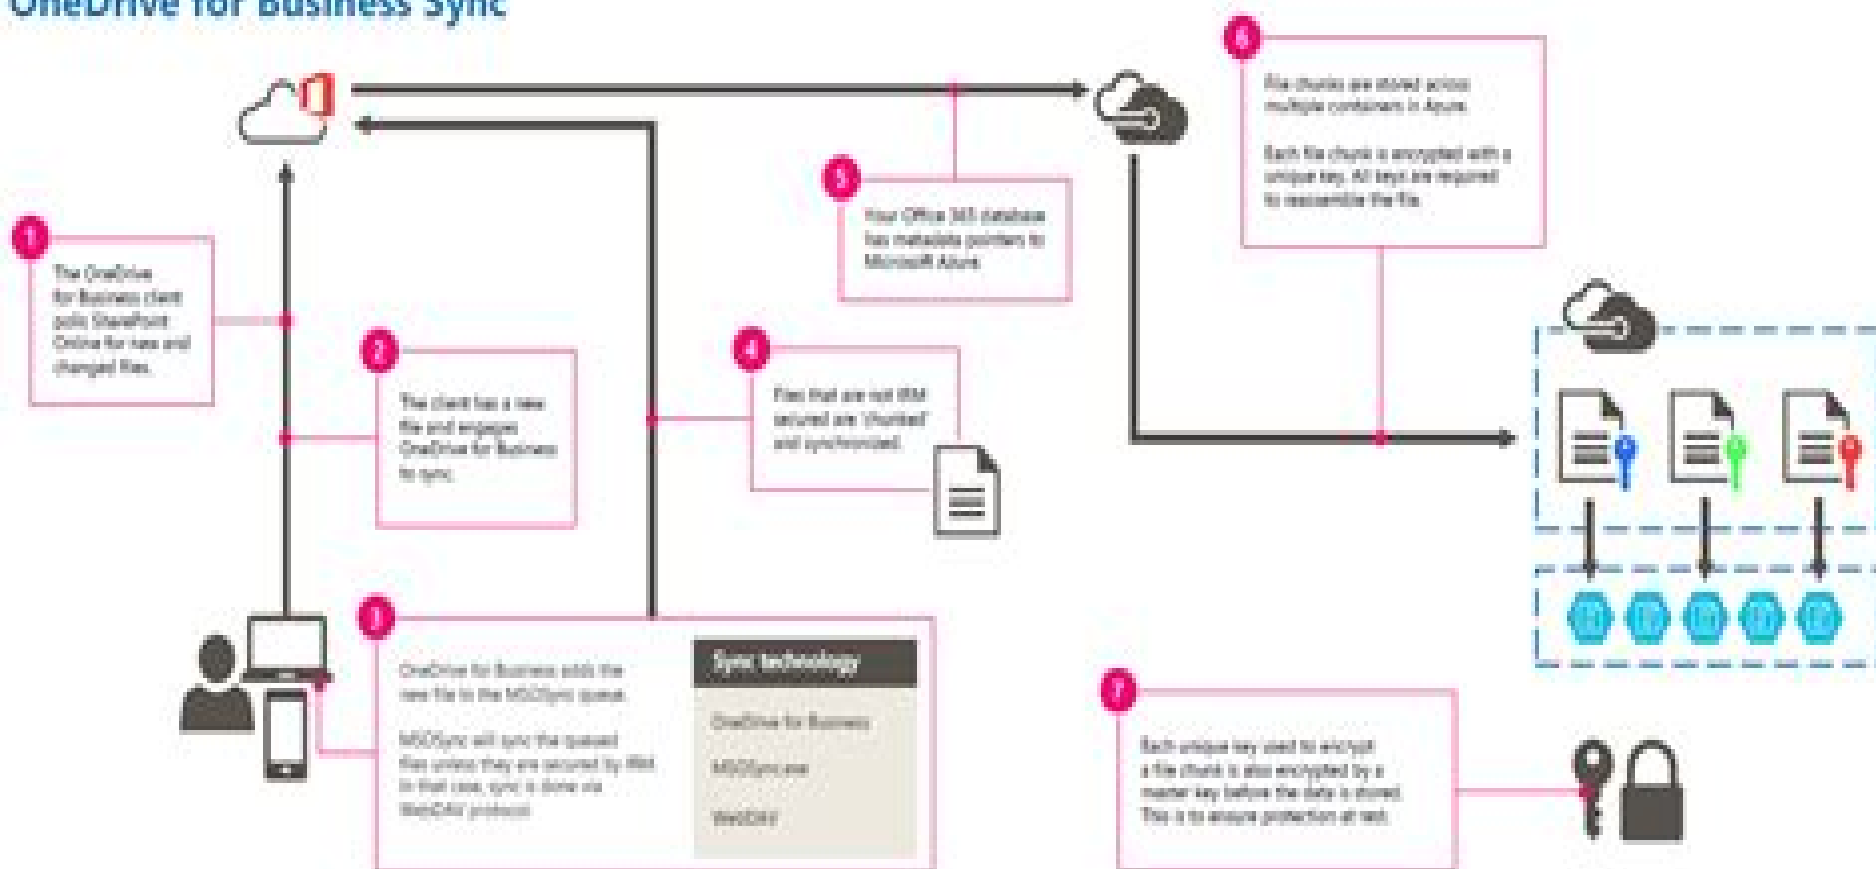

OneDrive for business is constantly checking for new and changed files to synchronize. When a change is detected, such as a new file on a client machine, client synchronization determines the technology to use to sync. Web services are used to bridge the gap between the client computer and Office 365.

#### Web Services used in synchronization

- **CollaborationService** - used for file synchronization.
- **SiteService** - returns site collection information.
- **WebService** - used to work with sites and webs.
- **ListsService** - used to work with lists and list data.
- **VersionService** - used to work with file versions.
